CLAIMS

- 1. An apparatus for installing and removing a harvesting combine rotor comprising:
 a harvesting combine including a frame portion, a linkage assembly operatively
 connected to the frame portion, a cab operatively connected to the linkage assembly to allow the
 cab to be raised to allow the installation and removal of a combine rotor.
- 2. The apparatus of claim 1 wherein the linkage assembly is rotatably connected to the frame portion.
- 3. The apparatus of claim 1 further comprising a plurality of cab support mounts operatively connected to the linkage assembly wherein the cab is mounted on the plurality of support mounts.
- 4. An apparatus for installing and removing a harvesting combine rotor comprising: a harvesting combine including a body and a frame portion, a linkage assembly operatively connected to the frame portion, a cab spaced apart from the body and operatively connected to a linkage assembly to allow the cab to be raised to allow the installation and removal of a combine rotor.
- 5. The apparatus of claim 4 wherein the rotor is installed and removed through a front end portion of the body.
- 6. The apparatus of claim 4 wherein the combine further includes a housing having a front wall and wherein the rotor includes a front end and a back end, the front end of the rotor located adjacent the front wall of a housing and the rear end of the rotor extending upward from the front end.
- 7. An apparatus for removing a rotor from a harvesting combine comprising:

 a harvesting combine including a housing and a frame portion, a linkage assembly operatively connected to the frame portion, a rotor disposed within the housing, a cab is operatively connected to the linkage assembly to allow the cab to be raised to allow the removal of the rotor from the combine.

10

- 8. A method of installing a rotor in a harvesting combine comprising:

 providing a harvesting combine including a housing and a frame portion, a
 linkage assembly operatively connected to the frame portion, a cab spaced-apart from the
 housing and operatively connected to a linkage assembly;
 - raising the cab to an up position; and installing a rotor in the housing.
 - 9. The method of claim 8 wherein the rotor is installed underneath the cab.
- 10. A method of removing a rotor from a harvesting combine comprising:

 providing a harvesting combine including a housing and a frame portion, a linkage assembly operatively connected to the frame portion, a rotor disposed within the housing, a cab operatively connected to the linkage assembly;

raising the cab to an up position; and removing the rotor from the housing.

11. The method of claim 10 wherein the rotor is removed underneath the cab.
